

EFFECTIVE **D**ISINFECTION

customized solutions for **YOUR** production and **YOUR** production flow

DISINFECTANT EFFICACY

	Peroxides (hydrogen peroxid/ peracetic acid) Oxidan Extra	Halogens (eg. Chlorine) Hypochlor DES	QAC / PHMB Desinfect Maxi (QAC), Desinfect 44 (PHMB), Desinfect Ultra (QAC/amin)	Amfoteric Tego 2000	Alcohol IPA sprit 70%, Combi Des 70%
Gram- bacteria Salmonella, E. coli, Campylobacter					
Gram- bacteria Listeria, Bacillus, Clostridium					
Bacteria spores Bacillus cereus	Only PAA				
Yeast					
Fungi					
Virus					
Bakteriophag	Only PAA				

Very effective

Effective

Minor or no effect

DESINFECTION

Disinfection is required in order to produce high quality products. Disinfection is a process, which takes place after cleaning the machinery/equipment. In order to ensure the disinfectant optimal conditions, it must be applied a clean surface. These are the preconditions for succeeding in any disinfection process.

A properly carried out disinfection is achieved using the correct dosage and working under the right temperature conditions. Only thereby we ensure that:

- Microbiological contamination is avoided
- Production efficiency is maintained
- Internal and external quality requirements are being complied
- Beneficial effect to the company image

Let Novadan review you production and let us advice you. Thereby you ensure a customization of the disinfection process to your cleaning methods and your working environment.

All Novadan's disinfectants are approved by Fødevarestyrelsen for use by food processing companies. Novadan comply with the guidelines for Biocides Regulation and regularly monitors the guidelines and EU requirements concerning biocides and biocide regulation.

Use biocides safely. Always read the label and product information before use.
